## **DETAILED ACTION**

### ***Claim Objections***

1. Claims 1-4, 6 are objected to because of the following informalities:

Claim 1 (line 2), “substrate” should be changed to --substrate;--.

Claim 2 (lines 1-2), “the programmable memory” should be changed to --the non-volatile, programmable memory--.

Claim 4 (lines 2), “the non-volatile memory” should be changed to --the non-volatile, programmable memory--.

Claim 6 (line 2), “the non-volatile programmable memory” should be changed to --the non-volatile, programmable memory--.

Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2612

3. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Schimdt (US 6,278,481).

Regarding claim 1, Schmidt discloses 1. An image capture device for capturing an image comprising a substrate (a single chip, Figure 5, Column 10, Lines 25-30, 49-55); an image sensor (CMOS imager 505, Figure 5, Column 10, Lines 25-39) on the substrate for receiving incident light; non-volatile, programmable memory (EEPROM program memory 520, Figure 5, Column 10, Lines 39-48) on the substrate for storing predetermined variables (instructions) that are loaded into predetermined circuitry used to manage the image sensor upon startup.

Regarding claim 2, Schmidt discloses the programmable memory is PROM, FLASH or EEPROM for providing non-volatile memory that keeps its contents when power is removed (EEPROM program memory 520, Figure 5, Column 10, Lines 39-48).

Regarding claim 3, Schmidt discloses the image sensor and integrally disposed programmable memory are components of a digital still camera (digital camera, See abstract, Figure 5).

Regarding claim 4, Schmidt discloses dedicated logic (microcontroller 510, Figure 5, Column 10, Lines 40-48) for loading the non-volatile memory prior to image capture.

Claims 5-8 are method claims of apparatus claims 1-4, respectively. Therefore, see Examiner's comments regarding claims 1-4, respectively, except for the step of "providing a

microprocessor for assisting the image sensor in image capture" which is disclosed as microcontroller 510 in Schmidt (Figure 5, Column 10, Lines 40-48).

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Heller et al. (US 6,396,539) discloses CMOS imaging device with integrated defective pixel correction circuitry.

Lee et al. (US 6,721,008) discloses integrated CMOS active pixel digital camera.

Hsieh et al. (US 6,757,019) discloses low-power parallel processor and imager having peripheral control circuitry.

Schinner (US 2003/0052984) discloses user selection of power-on configuration.
